

Build a web application that allows administrators to view and modify user profiles and their associated addresses.

Backend (Java/Spring Boot):

Create a "Base Service" that acts as a simple API.

Endpoints can return hardcoded data or maintain a simple runtime list (no persistent DB required unless you prefer it).

Provide data for: Users (Email, First Name, Last Name) and their Addresses (A user can have multiple addresses).

Frontend (React + MUI):

Implement a User List page showing basic info.

Implement a Modification Flow: Navigate from a User → to their specific Profile/Address management.

Manage a 1-to-many relationship: One user to multiple addresses.

Technical Requirements

Backend: Java 17+ and Spring Boot.

Frontend: React (latest), Material UI (MUI).

Navigation: Clear routing/navigation between the list and detail views.

State Management: Handling the modification of user/address data in the UI.

What We Are Evaluating (Criteria)

Cleanness & Lightness: Is the UI cluttered or professional? Does the code follow a clean, modular structure?

Navigation: Is the transition between the user list and the address modification intuitive?

Frontend Proficiency: Proper use of MUI components, responsive layout, and React best practices (Hooks, Props, etc.).

Pragmatism: Since the backend can be hardcoded, we are looking at how well you structure the API contracts to support the UI.

Submission

Zip the project or provide a Git link.

Include a README.md with:

Setup instructions (how to run both FE and BE).

A brief note on your design choices for the "User -> Address" flow.

Instructions Reinforcement

- Use real examples from your experience where applicable.
- Be concise but detailed, focus on your actual process and tools.
- Fill out each response field thoroughly.
- Ensure your answers are easy to read.
- Avoid large blocks of text, use bullet points or short paragraphs when helpful.
- Please save the using this file naming format:
(YourLastName)_(YourFirstName_AssessmentForFullStackDeveloper_(Date)).
- Submit it in PDF format no later than 16 business hours.
